

serrat

Mulcher of vine shoots, special for traditional fields of vineyard or espalier. It gathers the vine shoots, even the pre-pruning, thanks to the aspiration and turbulence generated by the rotor, not having difficulties to be employed at stony areas, for not having to bring the machine near to the soil.

The work complements itself with its utilization for the maintenance of the vegetable existing mantle between lines (reaped of grass). The width of work of the machine, is defined always between 1 - 1.20 m less than the frame of the plantation.
